New Mexico- Alamogordo FY 2003 Ranking Criteria Worksheet - Irrigated Cropland __Farm No._____ Tract No.____ CMS Field No's.____ Date_ Applicant Tribal Land Non-Tribal Land Preliminary Rating Final Rating 1. Water Quantity - 70 Potential Points Irrigation Efficiency - Use FIRS to Evaluate Benchmark After Potential % of Area in Contract % of Area in Contract After Points **Points Points** Efficiency Treatment before Treatment 1-20% 0 21-30% 0 31-40% 20 41-50% 30 51-60% 40 61-70% 50 71-80% 60 >80% 70 **Total** 1. Water Quantity 2. Water Quality - 40 Potential Points A. Surface Water Pollutants - 20 Points Maximum There is a probability that runoff water from irrigated fields contains sediment, salt, pesticides, and/or nutrients (or other associated chemicals). Treatment is needed to prevent these pollutants from entering live waters, or re-entering a shared irrigation system. Points will be awarded based on distance from the end of field to the nearest live waters or re-entry point into a shared irrigation system. If there is no run-off, after points will be 0. Distance of Surface Run-Off to Live Water Points After <100 Ft. 20 101 - 500 Ft. 15 501 - 1,320 Ft. 10 1,320 - 2,640 Ft. 5 >2,640 Ft. 0 Total A. Surface Water B. Ground Water Pollutants - 20 Points Maximum There is a probability that irrigation water containing salt, pesticides, and/or nutrients (or other associated chemicals) is leaching into the ground water. Treatment is needed to prevent these pollutants from contaminating ground water, through leaching and direct return flow into wells. Points to be awarded based on depth to the water table, or Depth to Water Table Points After 1 - 50 Ft or elimination of any direct discharge into ground water. 20 50 - 80 Ft. 15 80 -120 Ft. 10 >120 Ft. 5 Total **B.** Ground Water

Tribal Land Non-Tribal Land Preliminary Rating	Final Rating		
3. Selected Conservation Practice(s) - 85 Potential Points			
Any practice used in the ranking criteria and intended to be included in the conservation			
plan of operations must be cost-shared or have an incentive payment. Higher priority (value) should be given to those practices which address multiple resource concerns, are cost effective, and have longer life spans. Use the Quality Criteria in the FOTG to	Potential Points	Percent of need to be installed.	Points
establish the practices that have an impact on the identified resource concern. Some example practices are listed below:		motanoa.	
Soil Erosion			
Irrigation Land Land leveling (464)	10		
Water Quality			
Irrigation Water Management (449)	10		
Water Quantity	20		
Irrigation Pipeline (430DD or 430EE) Irrigation Water Conveyance (428a)	20		
Irrigation Valer Conveyance (426a) Irrigation Land Leveling (464)	10		
Irrigation System (441, 442, or 443)	20		
Irrigation Water Management (449)	10		
Air	10		
7 40			
Plants			
Pest Management (595A)	5		
Animals			
3. Selected Conservation Practices	Total		
4. Other Considerations - 20 Potential Points			
Below are some suggested, not required, criteria. If there are other criteria the D.C.	Potential		After
wants to recommend based on LWG advice, please include them here.	Points		Points
	00		
A. At risk species are in the area and the contract will enhance habitat for the species.	20		
B. Treatment of this land could have a beneficial impact on a 303d listed stream segment.C. Treatment of this land could enhance the benefits of an active sec. 319 project.	0		
D. This land is within a proposed sec. 319 project.	0		
D. This faile is within a proposed sec. 519 project.			
4. Other Considerations	Total
